Determn. of sex of ruminant embryos-by hybridisation assay using specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Discussion of the property of a 2.5 kb fragment of the Per gene of Drosophila. The motifs AcNGGN and/or TCAGGC (N=T, U, G, A, or C) or their complementary sequences are repeated in the probe. It is used in a hypridistation assay to determine the sex of runimant embryos. Either (i) Southern or (ii) Dot-blot techniques can be utilised and Y-chromosome shows up as intense signal either obscuring most of the hybridisation track in (i) or surrounding the dots in (ii). Significant results can be obtd. using samples of less than 50 ng weight.

Claim 1; Page 528-530; 1150pp; English.
X20500-21243 represent polynuclectide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrella infections in animals, and for the production of biosynthetic products such as enzymes. Sequence 4354 BP; 1148 A; 1183 C; 1084 G; 931 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              *tag= e

DAD-CANT9 includes CAW promoter, modified DHFR gene, splice donor and acceptor sites, Sv40 early adenylating signal, Sv40 origin, and mutitioning site. The 5'-non-coding region of human IFNalpha 2C-encoding CDNA was replaced with the non-coding region of human beta-globin mRNA using PCR. A PCR product of 0.64kb resulting from HindIII and XbaI restriction enzyme digests was isolated and ligated into appropriate restriction enzyme sites of plasmid pAD-CMV19. E.coli HB101 were transformed with the ligation prods. and an expression plasmid pAD-BD19-IFN secreting O-glycosylated human IFN-alpha 2C was identified. See also Q20764-66 and Q22517-29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16-JAN-1992.

Tumour treatment and to understand mechanisms to rused in tumour treatment and to understand mechanisms to TNF action tumour treatment and to understand mechanisms to TNF action tumour treatment and to understand mechanisms to TNF action blackouse; Fig 6(1-4); Slpp; German.

Disclosure; Fig 6(1-4); Slpp; German.

In produce In the unithe of patients with uraemia and probes/primers were constructed from the determined amino acid sequence.

To produce a vector expressing a soluble form of TNF-binding protein, this plasmid was cut with Xmm1, amplified by PCR and the protein, this plasmid was cut with Xmm1, amplified by PCR and the manified DNA cut with BamHI and Econ; Inserted into pT7/T3 alpha-19 (BRL) cut with the same enzymes to recover pTNF-BP. This was cut with BamHI and Econ; and the recovered fragment inserted into pab-CMV1 to give the required plasmid padrNF-BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         T 29-7AN-1991 (first entry)

0-glycosylated alpha-interferon - used for treatment of viral of tumour diseases
Disclosure; Fig 7 (A-D); 104pp; English.
A DNA sequence encoding IFN-alpha may be inserted into pAD-CMV19 and the recombinant prod. used to transform cells of a multicellular organism, pref. a vertebrate. The cell supernatant is harvested and the O-glycosylated prod. recovered by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ë

O-glycosylated alpha-interferon, used as medicament - isolated following secretion into conditioned medium of mammalian cells contq. a suitable expression plasmid blasmid pado-cmy 11(A-D); 24pp; German. Disclosure: Fig 11(A-D); 24pp; German. Plasmid pAD-CMV1 is formed from pCDM8, psv2gptDHFR20 and pBluescript SK+. The multi-cloning site is useful for the insertion of heterologous DNA, e.g. IFN. The plasmid is replicable in E.coli. See also 020764-66 and 025177-29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /*tag= c

This expression plasmid contains an intron sequence between the multi-cloning sequence and the poly(A) site. Variations may be made from pAD-CWYI, according to the amt. and positon of introns w.r.t. the multi-cloning site. For example, pAD-CWYI9 (Q20732) comprises only one intron between the CWV promoter and the multi-cloning site. A DNA sequence encoding IFN-alpha may be then be inserted into pAD-CWVI9 and the recombinant prod. used to transform cells of a multicellular organism, pref. a vertebrate. The cell supernatant is harvested and the 0-glycosylated prod. recovered by

Transmission path - using test cells transformed with reporter gene and requiatory sequence sensitive to gene and requiatory sequence sensitive to gene and requiatory sequence sensitive to genes at 17 inositol-1,4,5-tripeptide and disacylgylycerine(s)

Example; Pages 107-112; 170 pp; German.

Example; Pages 107-112; 170 pp; German.

Franside for the expression of genes or CDNA under the franscription control of genes or cDNA under the for hygromycin B resistance were constructed from expression plasmids pah-CMV1 and pah-CMV2 (Ep-A 393 438) and path Genes (c et al 1965). Plasmid pahlygCMV1 contains the many features, given in FT. Plasmid pahlygCMV2 differs from pahlygCMV1 only in respect of the polycloning site. 'N' in q4380 denotes where the sequence printed in the patent application was illegible.

Sequence 6630 BP; 1655 A; 1704 C; 1628 G; 1643 T;
               Example: Pages 102-107; 170 pp: German.
Plasmids for the expression of genes or cDNA under the transcription control of CMV promoters/enhancer and selectable for hygromycin B resistance were constructed from expression plasmids pAD-CMV2 (EP-A 393 438) and pREBO (Sugden et al 1985). Plasmid pAHyGCMV1 contains the many features, given in FT. Plasmid pAHyGCMV2 differs from pAHyGCMV1 only in respect of the polycloning site. 'N' in q43360 denotes where the sequence printed in the patent application is illegible.

Page 483-487; ll50pp. English.
X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, Treponema pallidum, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detection diseases related to Borrelia infections in animals, and for the production of blosynthetic products such as enzymes. Sequence 6993 BP; 1914 A; 2019 C; 1404 G; 1647 T;
                                                                                              DS-MX-1999 (first entry)
Polynucleotide sequence from the genome of Treponema pallidum.
Treponema pallidum infection; syphilis; Borrelia infection; animal;

New nucleic acid encoding mutant IL-6 with two cys residues replaced

The more active than native process, useful e.g. as

The more active than native process, useful e.g. as

Immuno-therapeutic or anti-inflammatcry agents

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

This sequence represents the coding sequence for a interleukin-6 (IL-6)

The interpolation of the invention of IC-6 is simplified and be used for regulating factor (HSF). The mutein IL-6

The mutain of the action of B or I cells, megakaryocytes or multipotent

Codifferentiation of B or I cells. The muteins can also induce acute phase proteins in liver cell. The muteins can be used as immunotherapeutic

The foreign sequence of the Coding sequence of thrombocytopaenia, and anti-inflammatory agents, in the treatment of thrombocytopaenia, and anti-inflammatory agents, in the treatment of thrombocytopaenia, and anti-inflammatory agents, in the treatment of thrombocytopaenia, and a priminating 2 of the Cys residues, purification and isolation of IL-6

Is simplified, as only one Cys-Cys disulphide bond can form during oxidation. Due to this, yields of the mutein proteins are improved in comparison to wild type IL-6. By removing the hydrophobic N-terminus, the yield can be further improved. The IL-6 muteinly 250-400 times

The standard of the coding sequence of the sequence of the standard of the secondard of the second
                                                                                                                                                                                         seq_documentation_block:

Mentification and quantification of bacteria, fungi and bacterial identification and quantification of bacteria, fungi and bacterial antification and quantification of bacteria, fungi and bacterial claims is page 108; 167pp; English.

The present sequence represents an antibiotic resistance gene blaz (resistant to beta-lactams), and was used to design PCR primers (7050-51. The specification describes the use of probes and/or amplification primers which are specific, ubiquitous and sensitive for determining the presence and amount of nucleic acids from a bacterial antibiotic resistance gene and specific bacterial and fungal species in any sample suspected of containing the bacterial or fungal nucleic acids, where each of the nucleic acid or variant or part comprises a selected target region hybridisable with the probes or primers and detecting the presence of hybridised probes or amplified products as an indication of the presence of the specific bacterial or fungal species and bacterial antibiotic resistance genes. The methods and products can be detect and identify the bacterial and fungal species and genera and determine the bacterial resistance to antibiotics.

EcoRI-Anot cut CDNA was then ligated into Unizap-XR

(Stratagene) with EcoRI at the 5' end and XhoI at the 3' end. SS-ilbrary phagemids were prepared from the same library by end. SS-ilbrary phagemids were prepared from the same library by CR) to Cot-omega of 11. After removal of hybrids and excess driver by streptavidin sepharose chromatography, the ss-phagemids were made double stranded and electroporated into Top-10 F'. Original library contruction by Bruce Blumberg (Cho et al. 1991 Cell 67, 1111-1120). Mormalized by Jihwan Song (Song, Cho and Rlumberg unoughlish)

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized adult 12-Day-Embryo library. CDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics This clone is also available through the I.M.A.G.E. Consortium at LLNL (info@image.llnl.gov). IMAGE

//dev. stage="adult" R-C3 | ibrary | is a subtracted library derived from the UI-R-C3 | ibrary, which is a subtracted library consisted of a mixture of individually taged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day embryo. The ragis a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C2) was constructed as follows: PCR amplified CDNA inserts from UI-R-C1 clones from within 3' SETS had been derived was used as a driver in a hybridization with the UI-R-C1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DHIOB bacteria (Life Technologies) to generate the UI-R-C2 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10, 20 10

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                           Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R93907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HLA-B3702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-NOV-1996 (first entry)

treating autoimmune diseases

Example 1: Page 19: 41pp; English.

Peptides Wi3784-98 and Wi3778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or creaminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (C-terminal amidated compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = (D, S or N; aa79 = R or E; aa80 = I or N; aa10 = R or E; aa81 = a hydrophobic or small amino acid; aa82 = R or E; aa83 = G or R; and as represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprises amino acid sequences related to a Class I HIA-B alphal domain (positions 79-84). They can be used to inhibit cyctoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in cresponse to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, consultation with antigenic because the products can also be consultative or the products can also be
                                                                                                                                                                                                                                                                                                                      19-JUN-1998 (first entry)
Peptide B2702.60-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosupressant drug; CTL activation; transplantation; autoAmmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R41221;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R93907-F92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-B3702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16-MAY-1996 (first entry)
HIA-B2702 CTL modulating peptide (B2702.60-84).
Cytotoxic T lymphocyte: CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-B2702.
                                                                               modulating cytotoxic T-lymphocyte activity towards targets
Example 13; page 39; 61pp; English.
The peptide is used to modulate cytotoxic T-lymphocyte (CTL)
activity, either by inhibition or stimulation. It can be used for
inhibiting CTL toxicity in transplantations, for inducing CTL
inhibiting CTL coxicity in transplantations, for inducing CTL
infection. The peptide can also be used for identifying CTLs which
bind to it and removing subsets of CTLs from a T-cell composition.
This peptide is derived from the HLA-B2705 antigen and corresponds
to the amino acid positions 60-84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Extension of acceptance period of transplants from MHC unmatched donor hosts – using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Disclosure: p6: 13pp; German.

THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to detect anti-HLA-Germine HLA-B 27 levels in human serum, eg for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27 antibody in human serum, or to produce mono- or polyclonal HLA B27 antibodies for use in immunoassay. Sequence 337 AA;

Treatment and diagnosis of HLA-dependent autoimmune disease - using peptide(s) derived from HLA-B27 or human keratin VI, e.g. for peptide(s) derived from HLA-B27 or human keratin VI, e.g. for Claim 2: Page 9: 57pp; German.

CC HLA-B27 or human keratin IV and are used in methods for diagnosis and/or treatment of HLA (human leucocyte antigen)-dependent autoimmune diseases. Such peptides have implications in the treatment of cases of Class I and II-associated autoimmune diseases, especially non-HLA-B27 diseases (iritis, uveitis, psoriasis and rheumatic diseases such as arbitis, psoriatic arthritis or Juvenile rheumatic diseases such as arbitistered intravenously, subcutaneously or intramuscularly, or to be administered intravenously, subcutaneously or intramuscularly, or to the mucosa (orally, or as nasal or pulmonary spray). This method results in antigens that are more specific than complete protein antigens, so provide a more exact classification of disease, and thus a more specific treatment. In the case of keratin-derived peptides, they also have better solubility. Compared with complete proteins, peptides are easier to prepare, do not require recovery from natural tissue or recombinant methods of production, have better storage stability when dry, are less contains and prepared methods of production, have required required
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 9; 80pp; English.
R83061-R83085, R83090-R83096 and R82907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-JUL-1998 (first entry)

Human HLA-B27 alpha-1 domain (aa. 60-80) peptide B27PA.

Human leucocyte antigen; HLA; alpha-1 domain; alpha-2 domain; HLA-B27;

Keratin VI; diagnosis; treatment; HLA-dependent autoimmune disease;

Class I-associated autoimmune disease; iritis; uveitis; psoriasis;

Class II-associated autoimmune disease; rheumatic disease; arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                  Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       84.2%; Score 112; DB 1; Length 26; 84.0%; Pred. New peptide(s) based on class I HLA antigen domains - used for modulating cytotoxic T-1ymphocyte activity towards targets

Example 13: Page 39: Glpp: English.

The peptide is used to modulate cytocxic T-1ymphocyte (CTL)

Cativity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL

Cativity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which conditions to it and removing subsets of CTLs from a T-cell composition.

This peptide is derived from the HLA-B38 antigen and corresponds to the amino acid positions 60-84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HLAB38 CTL modulating peptide (B38.6084).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLAB38.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

While Stranger's comparising lymphoid surface membrane proteins - which may will by 1940L/LY.

Tompsons. comparising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 9: 29p; English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the HLAB38.6084. These sequences can be used to isolate the protein p74 from a T-ceil lyaste. P74 is a T-ceil surface membrane protein associated with T-ceil activation in mammalian T-ceils, and is also immunologically cross reactive with the heat shock protein HSc70. P74 is found in a ceils. P74 can be isolated by lysis of a suitable ceil with an amphoteric detergent, and then passed through an affinity column collist. P74 can be isolated by lysis of a suitable ceil with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of P74 combined with CAT-ceils, by combining them with the extracellular portion of P74, and determining the amount of binding between the candidate compound and p74.

Containing T-ceils and antigen presenting cells (APCS), by adding to the mix the extracellular portion of P74, in an amount sufficient to compete containing of the P74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
HIAB38. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an WHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HLAB38.6084.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Class Instrocompatibility antigen Gogo-B0103 heavy chain precursor - lowland gorilla class Instrocompatibility antigen Gogo-B0103 heavy chain precursor - lowland gorilla (Species: Gorilla gorilla (lowland gorilla)

C.Species: Gorilla gorilla (lowland gorilla)

C.Species: 30-Jun-1992 #sequence_revision 30-Jun-1992 #text_change 23-Jul-1999

C.Accession: JH0541

F.Lawlor, D.A.; Warren, E.; Taylor, P.; Parham, P.

J. Exp. Med: 174, 1491-1509, 1991

A.Title: Gorilla class I major histocompatibility complex alleles: comparison to huma A; Reference number: JH0534; MUID: 92078860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C;Species: Homo sapiens (man)
